have a single page website where you can put your hands and face in an area (for each), the website then snaps the picture and you can upload it to:
- the pluto community to build the great chain of connected people
- to a private page where you can create your own mini-chain of connected people

Given the setup, the webpage:
- has to recognize when you are in position:
    ● 1 tracking box for each hand and the head
    ● 1 box for each hand and the head for where they should be
- take the picture for you as your hands are busy ;-)
    ● When the boxes line up enough: count down 3,2,1: snap picture
- work across devices
- not rely on someone else taking the picture as we are apart

Lib existing we can use directly in JS:
- https://towardsdatascience.com/handtrackjs-677c29c1d585
- https://blog.tensorflow.org/2020/03/face-and-hand-tracking-in-browser-with-mediapipe-and-tensorflowjs.html
